

THE FUNCTIONAL SETUP

The structure of GCA Committees has been thoughtfully designed to create a dynamic and effective ecosystem of leadership, expertise, and collaboration. This carefully orchestrated framework ensures that committees operate seamlessly, drive impactful initiatives, and collectively contribute to the advancement of the cybersecurity landscape. Here's an in-depth overview of each component within the committee structure:

✔ Committee Executive Panel (CEP)

The CEP assumes the pivotal role of steering the committee's course, providing visionary leadership and strategic guidance. Comprising accomplished leaders and professionals, CEP members hold the responsibility of shaping the committee's agenda, formulating action plans, and establishing timelines. Their leadership roles within their organizations or their extensive experience of 12-25 years in cybersecurity or related fields make them the driving force behind the committee's initiatives.

✔ Committee Chairs & Co-Chairs

As integral members of the CEP, Committee Chairs and Co-Chairs hold distinct leadership positions that drive the committee's operations and ensure alignment with its objectives. These roles, appointed from within the CEP, are entrusted with facilitating discussions, guiding decisions, and overseeing the committee's overall direction. Their terms of 12 months provide stability and continuity in leadership.

✔ Committee Subject Matter Experts (CSMEs)

CSMEs bring specialized knowledge and deep expertise to the committee. With backgrounds spanning 5-12 years in the cybersecurity domain, they enrich discussions by offering insights, analysis, and strategies to address complex challenges. Their contributions help the committee stay at the forefront of industry trends and best practices. Additionally, CSMEs are responsible for technical documentation, ensuring that the committee's initiatives are well-documented and technically accurate.

✔ Committee Staff Liaison (CSL) Team

The CSL team plays a vital role in ensuring the committee's administrative efficiency and seamless coordination. CSL members manage logistical aspects, assist with communication, and provide essential support for the committee's day-to-day operations. This enables the committee to focus on strategic initiatives without being encumbered by administrative tasks.

✔ Committee Documentation Associate (CDA)

CDA has the responsibility of managing, organizing, and maintaining essential documentation. The CDA ensures that vital information including frameworks, charters, decisions, and progress are accurately recorded and easily accessible to committee members.

✔ Committee Members

The committee members form the diverse foundation of expertise and experience that propels the committee's activities. Their collective knowledge spans various domains within cybersecurity, contributing to vibrant discussions, fostering collaborative efforts, and collectively working towards achieving the committee's mission and goals.

This meticulously structured approach empowers GCA Committees to leverage the synergistic potential of seasoned leadership, specialized expertise, efficient coordination, and a rich diversity of perspectives. By functioning within this collaborative framework, GCA Committees are uniquely positioned to make
